1 [Transportation, logistics, and distribution: Simulation modeling at union pacific railroad](#)

Malay A. Dalal, Lawrence P. Jensen

December 2001 **Proceedings of the 33nd conference on Winter simulation**

Full text available: pdf(334.81 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Despite the potential, the use of simulation technology at US railroads appears to be lagging behind that in manufacturing and other transportation industries. This paper describes three recent experiences of applying simulation at Union Pacific Railroad: validation of yard-queuing data used in a railroad operations planning and control system, evaluation of work-rest patterns for scheduling train crews, and evaluation of strategic transportation plan. Collectively they demonstrate the wide spec ...

2 [A course in effective programming](#)

G. David Ripley

January 1975 **ACM SIGCSE Bulletin , Proceedings of the fifth SIGCSE technical symposium on Computer science education**, Volume 7 Issue 1

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper describes a graduate Computer Science course in which all aspects of the programming process are examined. The course has been taught for the past three years, and represents an attempt to pull together various results of researchers working on this rather undeveloped but important area. Unfortunately space does not permit the inclusion here of many details or examples. Rather, the emphasis is on the form of the course and how the reference material is used in pursuing ...
